

Peace of Mind

The investment in your home should stand the test of time. Rest assured your home is built to the highest standards through independently verified Zero Energy Ready Homes.

Industry-leading best practices for wall, roof, and foundation assemblies, along with windows and appliances that meet or exceed ENERGY STAR® certification, ensure peace of mind for you with reduced maintenance needs and repair costs.

Third Party Inspected

Every Zero Energy Ready Home is fully inspected by certified professionals, ensuring that your home meets and exceeds the highest levels of performance for everything from insulation to low-to non-toxic paints.

The Zero Energy Ready Home label represents the best homes in the country. With three separate inspections, above and beyond the local permitting office, you know your home will meet the federal government's most rigorous guidelines.

Each home includes three certifications

- ENERGY STAR® for above code energy efficiency

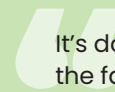

All lighting, appliances, and fans, provided are ENERGY STAR® certified for high-efficiency and performance that meets or exceeds consumer quality expectations.

- The U.S. Environmental Protection Agency's Indoor airPLUS for comprehensive indoor air quality measures
- Zero Energy Ready Home inspection for optimized efficiency plus performance

These independent inspections require performance simulations, field inspections, and diagnostic testing. As a result, each home is held to a substantially higher standard than a typical new home, giving you peace of mind for your investment.

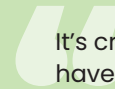

Moisture Protection

Water damage can be one of the costliest issues for homeowners. With a Zero Energy Ready Home, comprehensive water protection details are included from roof to foundation to safeguard from mold problems. A whole house fresh air system rids the interior of moisture.

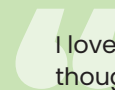

It's double checked. We like the fact that standards are in place.

HOMEOWNER

It's crazy the difference. We have not altered our standard of comfort. We have not made a conscious effort to conserve on energy. The house does it for us by the mere fact that it was built using the most energy-efficient products and methods in the industry.

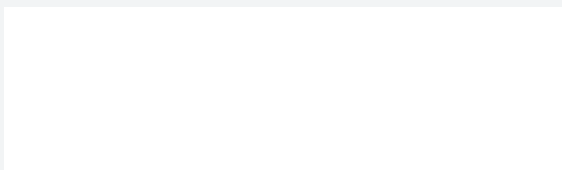

HOMEOWNER

I love this home. I never thought home ownership could be this easy. No condensation on windows, less dust, very little maintenance, affordable utilities, and it's good for the environment. It has improved our quality of life.
